

Mobile Developer

Openings	2	Experience	Mid-level (2–4 years)
Employment	Full-time	Location	India
Target Applications	6	Generated By	AI Recruitment Agent

About the Role

Technical Pots IT Solutions is seeking a Mobile Developer to contribute to the development and maintenance of mobile applications. The role is intended for a mid-level developer with practical experience in Flutter, Kotlin, REST APIs and Firebase.

Key Responsibilities

- Develop, maintain and enhance mobile applications using Flutter and related technologies.
- Implement application features using Kotlin where required.
- Integrate mobile applications with REST APIs and backend services.
- Use Firebase services for application functionality, data, authentication or related integrations as required.
- Debug issues, improve application stability and support application releases.
- Collaborate with product, design and backend teams to deliver application features.
- Write maintainable, readable code and participate in technical discussions and reviews.

Required Skills

- Flutter and Dart development
- Kotlin and Android development fundamentals
- REST API integration and API consumption
- Firebase services and mobile application integration
- Debugging, troubleshooting and application lifecycle knowledge
- Git/version-control workflow

Qualifications

- 2–4 years of relevant mobile application development experience.
- Hands-on experience building or maintaining production-quality mobile applications.
- Strong understanding of mobile development fundamentals and API integration.
- Ability to work collaboratively in a software development environment.

Nice to Have

- Experience with Android application deployment and release processes.
- Knowledge of state-management patterns in Flutter.
- Experience working with UI/UX teams and translating designs into mobile interfaces.

Culture & Benefits

- Collaborative software development environment.
- Opportunity to work on web, mobile and API-driven application projects.
- Exposure to cross-functional product, design and engineering workflows.
- Scope for technical learning and contribution to application development practices.
